

Abstract of the Disclosure

A cabinet structure includes a main frame, several separation boards, two side plates, a rear plate, and a top plate. Each separation board is pivotally mounted to the main frame. Each side plate is coupled to the main frame by hinges. Each side plate has a vertical groove defined in a rear end of an inner side thereof. Vertically spaced supporting blocks are formed on each vertical groove for supporting the separation boards. Each side plate includes engaging holes defined in a top side thereof. A fastener is partially engaged in each engaging hole. Each of two lateral sides of the rear plate is removably received in the vertical groove of the respective side plate. The top plate is removably mounted on top of the side plates and releasably engaged with the fasteners.
